SUMMARY

Backend & Automation Engineer with 1.5+ years building production systems for enterprise banking CRM platforms. Experienced in Python, SQL, and n8n workflow automation, with hands-on delivery of an LLM-integrated root-cause analysis engine, backend observability tooling, and full-stack cloud deployments on AWS and GCP.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

Backend & Frameworks: Django, Flask, FastAPI, REST APIs, SQLAlchemy, Alembic

Automation & AI: n8n, Workflow Automation, LLM Integration (OpenAI-compatible APIs), ChromaDB, NLP, Machine Learning, TensorFlow, Keras, Scikit-learn

Databases: SQL Server, Google Cloud SQL

Cloud, DevOps & Observability: AWS, GCP (Cloud SQL, Artifact Registry, Cloud Build), Docker, OpenShift, Git, AWS Kibana, OpenTelemetry (OTel)

Third-Party APIs: Google Places API, Google Maps Geocoding API, Gemini API, Meta WhatsApp Cloud API

Tools: Postman, Git, VS Code, Windows, Ubuntu, MS Office

EXPERIENCE

Businessnext (Acidaes Solutions) — Junior Engineer, Noida (Sector-62)

Feb 2025 – Present

- Selected among the top 30 in an internal AI assessment; onboarded onto the "AI Inversion" team to build AI-driven automation for enterprise CRM operations.
- Built a full-stack Smart RCA (Root Cause Analysis) CRM analytics platform integrating ChromaDB for semantic search and feedback memory, LLM-driven root cause narration via an OpenAI-compatible API (Gemma), multi-client SQL Server connectivity via pyodbc, and XML-based automation rule parsing — supporting production CRM deployments for HDFC Bank, AU Small Finance Bank, Maybank (Philippines), and Bank Negara Indonesia.
- Wrote Python scripts and SQL stored procedures to automate operational reporting; diagnosed production issues using AWS Kibana and OpenTelemetry (OTel) tracing, and monitored containerized services on OpenShift.

Artclear Limited — Python App Developer Intern, London, UK

Aug 2023 – Sep 2023

- Built a weather application using the OpenWeather API and Python/Tkinter, processing and displaying real-time weather data based on user location input.

4soft S.A — Python Intern, Wroclaw, Poland (Remote)

Oct 2022 – Jan 2023

- Built a flight-tracking application using the OpenSky API, with a Python backend and HTML/CSS frontend to process and display real-time flight details.

PROJECTS

Employee Management System (Python, Django, SQL) — Web app streamlining employee data management: add/update/delete records, detail tracking, user-friendly forms. [GitHub](#)

Crop Recommendation System (Python, Flask, ML) — ML app recommending crops from soil/climate data using predictive models on historical data. [GitHub](#)

Image Classification API (Python, Flask, Docker, TensorFlow, Keras) — Backend API using Inception V3 to classify images, with token-based auth, tested via Postman. [GitHub](#)

Bank API (Python, Flask, MongoDB, Docker) — Backend banking API with bcrypt-secured, token-based auth for deposits, transfers, and loans. [GitHub](#)

CERTIFICATIONS

- CRM Developer (Post-Training Completion) — Businessnext | [View Certificate](#)
- Python Data Structures & Algorithms — Coding Ninjas | [View Certificate](#)
- Python DevOps — Udemy | [View Certificate](#)
- Research Paper — The Hinweis Research | [View Paper](#) Research Paper — Grenze | [View Paper](#)

EDUCATION

JIMS Engineering Management Technical Campus (GGSIU), Greater Noida

June 2020 – June 2024

B.Tech, Computer Science Engineering
